Environmental protection is an increasing concern of individuals, organisations and governments

Due to the pressures of population and technology the biophysical environment is being degraded, sometimes permanently. This has been recognised and governments began placing restraints on activities that caused environmental degradation. Since the 1960s activism by the environmental movement has created awareness of the various environmental issues. There is not a full agreement on the extent of the environmental impact of human activity and protection measures are occasionally criticised.

We offer a range of activities to protect the environment, such as environmental studies, environmental management and environmental engineering and more. Studies which show the history and methods of environmental protection.

Protection of the environment is needed from various human views and activities. Waste, pollution, loss of biodiversity, introduction of invasive species, release of genetically modified organisms and toxics are some of the issues relating to environmental protection.

The main activity areas of environmental protection include climate, forest and water protection. Currently, especially the problems of global warming and air pollution are discussed.

Our experience will help you to make the right decisions, for all activities in environmental protection. Protection of the environment is needed to build up the future of the coming generations. Think about it. Thank you !

A part of our range of services

Environmental Due Diligence

- Contaminated material investigation
- Fire protection investigation and preparation of fire protection plan acc. to laws and regulations
- Construction ground investigation and evaluation
- Constructional pollutants
- Plant safety, plant assessment (state of technology)
- Obtaining required licences
- Legal environmental requirements

Water, ground and building recycling

- Soil and groundwater investigation
- Building checks
- Appraising of the actual condition
- Sanitation and demolition plan
- Reconstruction, recycling and utilization planning
- Sanitation of old pollution, reorganization and planning
- Appraisal of pollutants
- Pollutant survey and classification
- Construction material investigation
- Preparation of bill of quantities
- Construction supervision
- Construction site management
